

TeleNav Integration Services

Extend the reach of business processes and back-office systems to your mobile workforce.

TELENAV INTEGRATION SERVICES OVERVIEW

TeleNav provides comprehensive integration capabilities to help you extend your back-office systems to your mobile workforce. These capabilities include the TeleNav Data Exchange (TDX) and a System Integration team that can help you implement.

TELENAV DATA EXCHANGE

TeleNav Data Exchange is an integration platform that extends TeleNav Track capabilities to your systems bringing near real-time visibility to field operations right into your back-office applications. Various types of data can be exchanged between TeleNav Track and your back-office system including:

- GPS location
- Alerts (geo-fences, speeding, etc)
- Timesheet data
- Jobs/work-orders and Messages
- Wireless forms data
- Mileage traveled data

Five types of integration solutions are available:

- Web Services
- Inter-Database Data Transfer
- Third Party Connectors
- FTP Data Backup
- Email Dispatch

TeleNav provides a comprehensive set of integration options for businesses. TeleNav integration options are affordable and convenient, enabling companies to connect existing back-office systems with mobile operations. TeleNav provides step-by-step instructions and guidance to help your business leverage mobile data for improved operations.
