

TeleNav Vehicle Manager™

Powered by Turnpike

Better manage drivers, fleets and IFTA compliance

MANAGE DRIVERS AND VEHICLES IN NEAR REAL-TIME

Now you can manage your fleet and your drivers/resources in near real-time. TeleNav Vehicle Manager combines handset MRM capabilities with vehicle diagnostics and is the mobile alternative to onboard computers. TeleNav Vehicle Manager is an integrated navigation, tracking and vehicle diagnostics solution. It combines the latest advances in GPS, wireless and Web technologies to make mobile workforce and vehicle management an affordable reality for businesses of all sizes.

BENEFITS

• DRIVER MANAGEMENT

- » **Reduce out-of-route miles** with voice guided turn-by-turn GPS driving directions.
- » **Improve driver productivity with GPS tracking and reporting.** View the GPS location of your mobile workforce on a Web-based map and assign new jobs based on their locations. Run reports to review their work history.
- » **Improve communication using wireless forms and dispatching.** Transmitted to the office in near real-time wireless forms reduce error-prone data entry. Dispatch your mobile workforce through their wireless devices and send complete job details.
- » **Improve payroll accuracy** and improve your mobile workforce's time and attendance with wireless timecards.
- » **Improve customer satisfaction** with confirmed customer arrival and departure times.

• VEHICLE MANAGEMENT

- » **Improve compliance** with automated IFTA and state mileage reports. With a click of the mouse you simply print, sign and send the IFTA and state mileage reports.
- » **Reduce fuel consumption** by monitoring idle times and miles per gallon directly from the vehicle engine.
- » **Improve driver and vehicle safety** by monitoring vehicle speeds and hard braking reports.
- » **Reduce unnecessary idling** by monitoring vehicle idling times.
- » **Improve vehicle maintenance** using engine diagnostics data for scheduling maintenance, verifying lease miles and identifying maintenance issues, all without taking the vehicle off the road.

Specifications

- Dimensions – 4.0"(L) x 3.5" (W) x 1.0" (H)
- Direct Connection to vehicle engine diagnostic port (J1708, J1850, J1939, OBD II, CAN)
- Temperature, vibration and shock resistant

telenav track™

FEATURES

- Audible turn-by-turn navigation
- GPS tracking and reporting
- Wireless timecards
- Wireless forms with barcode and signature capture
- Job dispatching
- Vehicle stop detail with arrival and departure time
- Customer stop reports
- Stopped and idle time reports
- Speeding reports
- Hard braking reports
- Odometer mileage and vehicle fault codes
- Fuel efficiency and consumption
- IFTA reporting

HOW IT WORKS

TeleNav Vehicle Manager has three main components:

- An electronic onboard recorder (EOBR) embedded in your vehicle
- A handset with Bluetooth® capabilities
- TeleNav Track's Web console to manage your drivers and vehicles

The EOBR transmits vehicle data via Bluetooth on the driver's handset back to the TeleNav Track Web console which can then be viewed by the dispatcher/administrator.
